

Class A4 Additional Parts

The Hattons Originals Class A4 has a small number of additional parts that can be fitted by the owner to enhance the product. Please make a note of the model you are attaching them to as not all parts apply to all models.

Ashpan Lever

Part applies to: All models

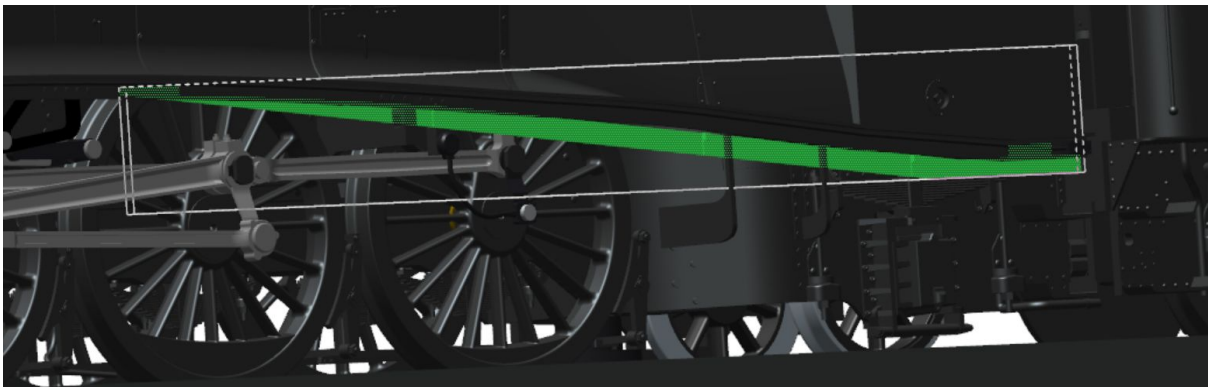

The ashpan lever was used by the driver to drop the ashpan to clear ash from the firebox, it fits under the right hand side of the cab and firebox.

Reversing Lever

Part applies to: H7-A4-006 to H7-A4-009 (optional for other models)

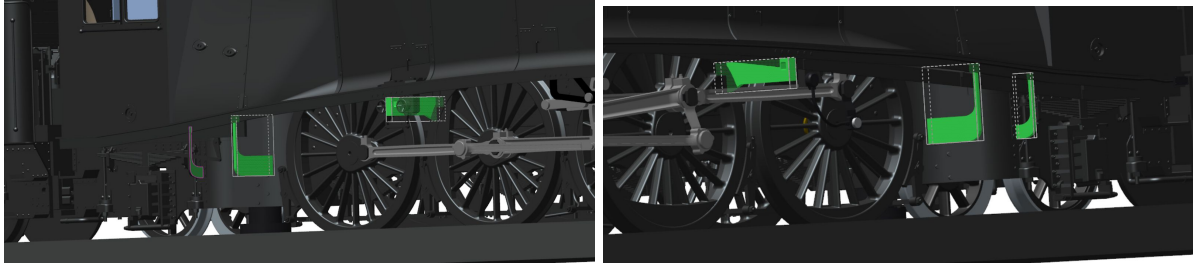

This runs under the left side of the running board. If fitting the running board supports as well, it is important that this lever is fitted first. It runs from under the cab to just behind the front driving wheel. It was used by the driver to change the cutoff setting of the valves, almost like gears on a car.

Running Board Supports

Part applies to: H7-A4-006 to H7-A4-009 (optional for other models)

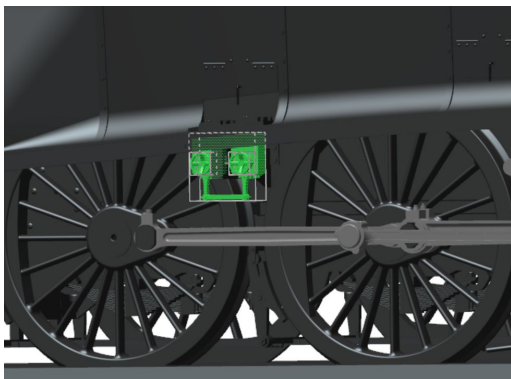

These are brackets under the running board on both sides which support it.

Oil Lubricator wheels

Part applies to: H7-A4-006 to H7-A4-009 (optional for other models)

The oil lubricator wheels are linked with the running gear to supply oil to moving parts. These are fitted under the right hand side running boards under the flat section with the oil wells.

Valance Pipe

Part applies to: H7-A4-006 to H7-A4-009 only

This runs along almost the length of the left running board and then curves under the valance near the cylinders. There is also a bracket which is around ¼ of the way along its length which consists of 2 parts.
